1 Credential Type
Which API are you using?
Different APIs use different auth platforms and some credentials can be restricted to only call certain APIs.
Select an API *
Gmail API
What data will you be accessing? *
Different credentials are required to authorize access depending on the type of data that you request. Learn more
User data
Data belonging to a Google user, like their email address or age. User consent required. This will create an OAuth client.
Application data
Data belonging to your own application, such as your app's Cloud Firestore backend. This will create a service account.

2 OAuth Consent Screen
App information
This shows in the consent screen, and helps end users know who you are and contact you
App name *
GenEmail
The name of the app asking for consent
User support email *
For users to contact you with questions about their consent. Learn more
App logo
This is your logo. It helps people recognize your app and is displayed on the OAuth consent screen.
After you upload a logo, you will need to submit your app for verification unless the app is configured for internal use only or has a publishing status of "Testing".
Learn more
Logo file to upload
BROWSE
Upload an image, not larger than 1MB on the consent screen that will help users recognize your app. Allowed image formats are JPG, PNG, and BMP. Logos should be square and 120px by 120px for the best results.

Your OAuth consent screen has been configured and your app has a publishing status of "Testing". This means it can be used by a limited set of test users, which you can set up on the OAuth consent screen page.
If you want to make your app generally available to all users, you will need to set the publishing status to "In production". You will also need to submit your app for verification, which can take up to 4-6 weeks (depending on which OAuth scopes your app uses).
